Education

University of Toronto 09/2022 – 08/2026
Bachelors (Technology Coding Society, Computer Science)

Experience

Full Stack Software Engineer 06/2026 – Present
Plato
- Built responsive, accessible full-stack features and reusable UI components in React and TypeScript to support simulation requirements outside automated generation flows.
- Streamlined simulation builder pipelines and authored automated unit/functional tests, reducing critical production bugs and pipeline errors by 64%.
- Implemented robust defensive error-handling, REST API integrations, and continuous QA validation workflows, cutting end-to-end iteration turnaround time by 21%.

Development Intern 05/2024 – 09/2024
Reflectivity.io
- Implemented high-level business requirements into technical specifications and actionable tickets, enabling the implementation of complex TypeScript and Python workflows
- Spearheaded a backend modernization initiative that improved middleware workflows, resulting in an **18% increase in resource efficiency** and a measurable reduction in development overhead.
- Managed technical debt and security compliance by overseeing full-stack dependency updates, achieving a 6**% reduction in runtime** and lowering infrastructure costs.
- Performed **thorough code reviews** and strengthened testing processes, boosting team collaboration and ensuring high-quality code

Software Intern 04/2023 – 08/2023
Reflectivity.io

- Implemented scalable serverless architecture on AWS Lambda, optimizing system performance and reducing long-term infrastructure overhead.
- Created responsive web applications using front-end frameworks like Angular, optimizing user interfaces and improving site functionality
- Created detailed documentation for the development processes which lead to the implementation of efficient and modern coding practices

Projects

MediSense 01/2025 – 04/2025
Making OTC medicine more accesible
- Conceptualized and managed the project scope to make OTC medicine accessible, integrating advanced UI components for price comparisons.
- Engineered a scalable **microservices backend** supporting real-time data aggregation and secure user authentication.
- Implemented **AI-driven price analysis algorithms** to identify optimal medication deals, enhancing savings and value for users.

Physiofind 01/2026 – 05/2026
Find the right provider.
- Directed the technical lifecycle of a full-stack **Vue, .NET** and TypeScript web application, managing development workflows and system architecture decisions.
- Engineered backend functionality centered on **AI data aggregation and search optimization**, enabling high-accuracy matching between patients and non-standard healthcare providers.
- Architected the project infrastructure using modern cloud services, implementing **DevOps pipelines** to guarantee reliable deployment and system scalability.

Skills

HTML/CSS/JS | Python | Node.js | Java | C# | C++ | AWS | Postgress/MySQL

Google Cloud | Git | Agile | Scrum | Requirement Analysis | Jira | React | RAG
